This report came from a community partner reporting a substance sold as Oxy that produced unexpectedly strong effects and tested positive with fentanyl.

Location/community of where the drug was used	North Sydney/Sydney Mines
Date and time when the drug was used	29 May 2023, 04:50 pm
Name(s) of the drug (i.e. what was assumed to be used/ what the drug was sold as)	Green Oxy 80
Description of the drug and its packaging	Lighter green straight through the pill, thinner and harder to break apart. 'APO' on one side, 'OCD 80' on the other side, printed on pill.
How the drug was used	Injection
Observed reaction of the drug used	Heavy nod
Drug testing results (suspected composition)	Tested positive for fentanyl when tested on fentanyl test strip

No photo of the drug was available.

Please share through your communication networks (e.g. posters in your service locations, conversations with individual clients, social media posting, etc.).

Please also include the following harm reduction messages:

- Don't use alone, if possible. Keep a distance of 2 meters and respect public health measures to reduce the spread of COVID-19 if using substances with others.
 - Overdose Prevention Sites support harm reduction by providing equipment and a safe and caring space for people to use drugs. These sites are equipped to respond to overdoses and connect people to important health and social services.
 - ReFIX Halifax Overdose Prevention Site:
 - Address: 2107 Brunswick St. Halifax; Phone: 902-209-9370
 - PeerSix Overdose Prevention Site
 Address: 75 Prince St. Sydney; Phone: 902-567-1766
 - o If you are using alone, call the National Overdose Response Service (NORS) phone line at 1-888-688-NORS. It is a 24/7 phone line available for anyone in Canada to call and the operator will "spot" you while you use. For more information visit www.nors.ca.
 - Alternatively, call a trusted support person and let them know you are using alone and provide them with your location.
- Start with a test dose. Start low, go slow.
- Have naloxone available, even if you aren't intentionally using opioids. Although naloxone only
 works to reverse opioid overdoses, there is no harm in administering it if you are unsure what
 kind of overdose you are witnessing. Naloxone is available for free from most community
 pharmacies and other community locations, including needle distribution and disposal
 organizations. For more information about where to get a free naloxone kit and how to use it,
 visit http://www.nsnaloxone.com/
- Call 911 in the event of an overdose. Know your rights under the Good Samaritan Act.

NOTE: This distribution list is designed to establish a flexible, low-barrier, community-driven process for communicating unexpected drug use-related harms observed in the community. Information in the alerts is not verified.

To submit a report, please send an email to NSDrugAlert@nshealth.ca with the subject line "Drug Report". Please include as much of the following information, as possible:

- 1. Location/community of where the drug was used
- 2. Date and time when the drug was used
- 3. Name(s) of the drug (i.e. what was assumed to be used/ what the drug was sold as)
- 4. Description of the drug and its packaging, especially anything unusual
- 5. How the drug was used
- 6. Observed reaction of the drug used, especially those that are unusual compared to the expected effect of the drug
- 7. Drug testing results (suspected composition of the drug)
- 8. Photo of the drug, if possible

When gathering information about a drug, such as taking pictures, please ensure you respect the confidentiality and anonymity of clients and consider safety first. Please do not include confidential or individually identifiable information (e.g. client name or picture).
